

BRIAN BELL

Regulated Manufacturing ◇ System Design ◇ Robotics
briantbell.work@gmail.com ◇ briantbell.github.io

OVERVIEW

Project Engineering with experience leading regulated manufacturing, research, and system development programs in an aerospace and defense setting. Looking to become a member of a strong team and take on challenging problems.

EXPERIENCE

Custom Manufacturing & Engineering

Oct 2025 - Current

Mechanical Engineer

Tampa, FL

- Owned concurrent manufacturing programs, from contract breakdown to production. Responsible for planning, execution, and reporting to C-suite leadership.
- Hundreds of hours reviewing contracts and technical drawings, navigating specifications, sourcing COTS parts and working with machine shops to support new product integration and production.
- Performed electromechanical system redesign and testing in light of obsolescence issues. Lowered the cost and complexity to manufacture a staple system, while improving our technical data in parallel.
- Led research and design to simulate, develop and commercialize robotics platforms (and their logic controllers) for tele-operated and autonomous tasks.

MWA Environmental

June 2024 - December 2024

Cadet Engineer

Brisbane, QLD

- Built Python automation systems to parse and structure high-volume datasets (200+ weather stations; 43,200+ octave-band noise measurements), enabling filterable analysis and compliance-driven threshold comparison.

PROJECTS

Autonomous Cobot-Enabled Workcell

Oct 2025 - Present

Custom Manufacturing & Engineering

Tampa, FL

- Technical Lead for the development of a commercial high-precision dual-cobot workcell platform. Drove system architecture, electromechanical integration, control software development, and testing. Regularly interfaced with executive leadership and clientele and assisted R&D proposals for further development.

Regulated Hardware - R&D / Systems Engineering

Oct 2025 - Present

Custom Manufacturing & Engineering

Tampa, FL

- Led the design, redesign, and prototyping of regulated multi-assembly electromechanical systems, spanning CAD, drafting, subsystem integration, supplier sourcing and coordination. I've also performed hands-on assembly, technical troubleshooting, test planning, execution, and documentation for controlled release.

EDUCATION

Queensland University of Technology, Brisbane

June 2025

B.Eng. Honors Mechanical | Minors in Computer Science & Finance

Overall GPA: 6.7 | First Class Honors | Executive Deans' List for Academic Excellence

TECHNICAL STRENGTHS

Passions

System Design, Coding, Research, My Community

Tools

SolidWorks, Python, ANSYS, Additive Manufacturing, Applied AI

Skills & Traits

Project Execution, Social Fluency, Technical Curiosity, Relentless Follow-Through.
